

**Adaptations are features that help plants and animals survive in their environment.**

1. Go outside and find a plant or animal to study. Remember insects, spiders, and other invertebrates are animals.
2. Record where you found it.
3. Draw a picture of this plant or animal in the box below, or on another paper. Include details and label the details so that someone else can understand what you are looking at.

A large, empty rectangular box with a black border, intended for students to draw a picture of a plant or animal they have observed.

4. Record your observations.
5. Which of your observations do you think could be adaptations?
6. Write down any questions you might have about this plant or animal.
7. Use books or the internet to gather more information. What did you learn?
